

1. Two Sum

[Description \(/problems/two-sum/description/\)](/problems/two-sum/description/)[Hints \(/problems/two-sum/hints/\)](/problems/two-sum/hints/)[Submissions \(/problems/two-sum/submissions/\)](/problems/two-sum/submissions/)[Discuss \(/problems/two-sum/discuss/\)](/problems/two-sum/discuss/)[Solution \(/problems/two-sum/solution/\)](/problems/two-sum/solution/)[Discuss \(https://discuss.leetcode.com/category/9\)](https://discuss.leetcode.com/category/9)[Pick One \(/problems/random-one-question/\)](/problems/random-one-question/)

Notes

Given an array of integers, return **indices** of the two numbers such that they add up to a specific target.

You may assume that each input would have **exactly** one solution, and you may not use the **same** element twice.

Example:

Given nums = [2, 7, 11, 15], target = 9,

Because nums[0] + nums[1] = 2 + 7 = 9,
return [0, 1].
